

**Overview of ongoing research projects:
*collaboration projects of Waternet***

Symposium Waterharmonica

Joost Kappelhof, april 24, 2009

Outline

- My view on waterharmonica
- Overview projects
- Ideas for application at Waternet

My impression of the waterharmonica by talking around with colleagues

- Two groups of people:
followers and **opponents** of the Waterharmonica

What do we know?

- A lot! As we've seen in the former presentations
- Water quality:
 - N-removal varies from 0 upto 0,8 ppm
 - P-removal small, upto 0,1 ppm
 - Reduction suspended solids reasonable (appr.50%) and as SS trap during hydraulic peaks
 - Disinfection 1 to 3 logreduction in the system
 - Toxicity reduces, but not quantified yet
- Biodiversity increases
- Image waterboard improves

Main questions

- How to design to reach a desired effect?
- Effects of peaks: hydraulic and quality
- How and where takes disinfection place?
- SS out, what transition takes place and is SS-out better than SS-in?
- Toxicity effects: where occurs what improvement?
- Hygienic quality: can we produce water quality that meets bathing criteria?
- The value of biodiversity achieved by waterharmonica
- Value for recreation and the image for waterboards

Reserach set up Waternet related projects

- Finalizing PhD student activities Ruud Kampf
- Stowa project
- PhD student Bram Mulling
- IP-KRW project "moeraszuiver afvalwater"

Finalizing PhD work Ruud Kampf

- Analyzing data collected from different sites:
 - Everstekooog
 - Aqualan Grou
 - Empuriabrava
 - Horstermeer
- N, P, SS removal: seasonal variations
- Briefly: hygienic quality, biodiversity
- To do:
 - Some additional analysis
 - Writing dissertation

Hoopsteraadenschap
Hollands
Noorderkwartier

vrije Universiteit amsterdam

Delft University of Technology

UNIVERSITEIT VAN AMSTERDAM

Universitat de Girona

Finalizing PhD work Ruud Kampf

- Network is powerful
 - Same experiments at different places
 - Working in 'open space' leads to discussions

wateronet

Stowa project

- Stowa funds 230.000 euro, 2009-2010
- Project manager: *Rob vd Boomen* (Witteveen en Bos)
- Focus on: design criteria constructed wetlands
 - Based on existing data
 - Knowledge gap: behaviour in cases of peaks
 - Hydraulic peaks
 - Disfunctioning WWTP (SS, N, P)
- Monitoring program focussed on peaks
- PhD student UvA: connected to Stowa project

Witteveen + Bos

wateronet

PhD student Bram Mulling (UvA)

- Waternet funds PhD student
- The fate of particles in constructed wetlands (with help of the Spanish experiences)
- Transition in suspended solids in Daphnia ponds, in reed beds and fish spawning area
- Behaviour of pathogens and role of predation of pathogens on hygienic quality
- Knowledge also applicable for natural banks and other projects

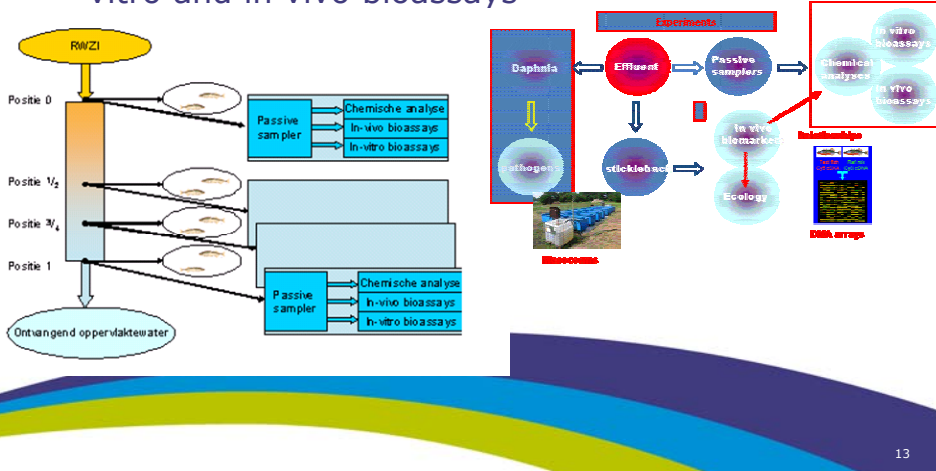

IP-KRW project "moeraszuiver afvalwater": Imares

- Project initiated and managed by Imares (*Edwin Foekema*)
- Upgrading Treated Wastewater in Constructed Wetlands
- Project cost: 1.267.480 Euro, subsidised 1.073.980 Euro.
- Partners: ImaresWUR, Deltares, Waterboard Fryslan, de Dommel, Aa en Maas, Waternet
- Aim: risk and effects of emerging substances in treated waste water including a constructed wetland system and predation of pathogens by daphnia:
 - Monitoring strategy aquatic toxicology
 - In what compartment are emerging substances (organics and pathogens) removed?

Monitoring approach "moeraszuiver afvalwater"

- Aim: relation between chemical analysis and, in vitro and in vivo bioassays

Ideas for application by Waternet Horstermeer

Nazuiverings-
vijvers,
ecologisering van
het effluent,
waterbuffer, etc.
40 – 80 ha

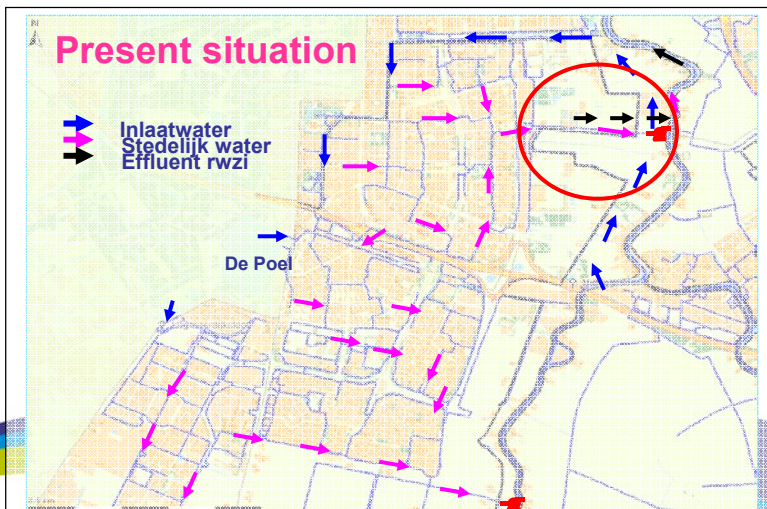

Moeras-
systeem 20
ha bij de
rwzi

Rwzi Horstermeer met een moerasysteem van ca. 20 ha bij de rwzi

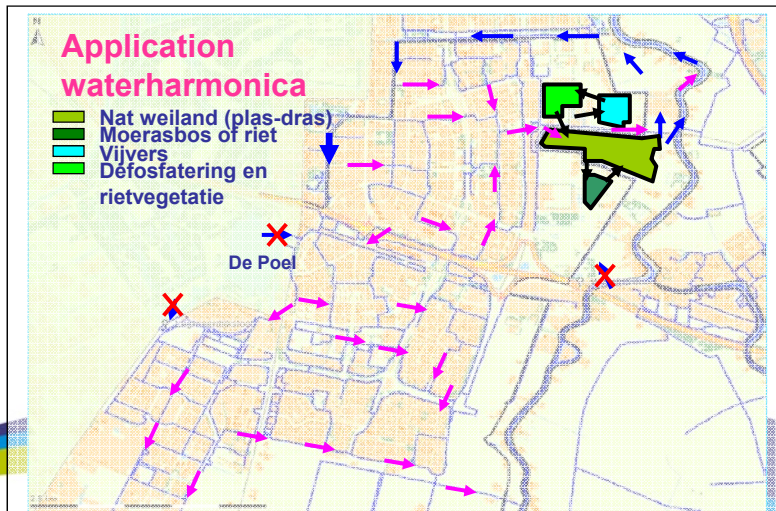

- Water ca. 34 ha, 100 % effluent
- Belasting 15 cm/dag, ca. 1 m²/i.e.
- Hydraulische verblijftijd ca. 3.5 dagen

Gevolgd door een ecologiserend filter als waterbuffer, etc.

**Ideas for application by Waternet
WWTP effluent in city of Amstelveen via
waterharmonica**

**Ideas about applications for Waternet
WWTP effluent in city of Amstelveen via
waterharmonica**

Conclusions

- Research projects focussed on
 - Design criteria
 - Value of waterharmonica in terms of water quality
 - Particle characterization
 - Hygiene
 - toxicity
- also attention for
 - Value of biodiversity in the water
 - Value from image point of view (experience of the watercycle and recreation)
- KRW boost leads to:
 - Even better network
 - better knowledge about the value of Waterharmonica

Discussion: the Spanish situation compared to us

- Do our activities on water quality (particles, hygienic oparameters, toxicity) cover your biggest concerns?
- How do the Spanish deal with:
 - Value of biodiversity in the water?
 - Value from image point of view (experience of the watercycle and recreation)?
